## After School Activities

by: Technology Enrichment Students

We had several after school activities at CES this school year!

For the first one, students built Cityscapes using cardboard and other recyclable materials.

**Original Works!**

Original Works is where students

come together to put their imagination to the ultimate test. First, everyone receives a plain piece of paper to practice on. If they need another one, they can get as many as they need. [You aren't allowed to draw anything that has a copyright, for example, Spongebob] After you sketch it, you ask for a thicker piece of paper that is your final draft. You redraw and then add color. We also had water and snacks!

CES Kid's Lab!

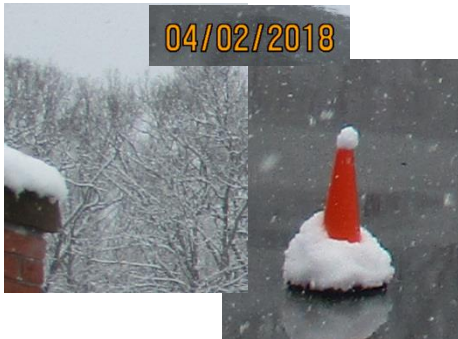

Marble Run was the first CES Kid's Lab after school activity. Oh what fun...

## Spring???

by: Technology Enrichment Students  
& Mrs. Giuliano

We didn't think the snow would ever stop falling from the sky. It was still snowing in April!

April 6<sup>th</sup>, and yes, that is snow! Students were excited to have recess in the snow! AND... The snowflakes were

huge on  
April 10<sup>th</sup>!

 **April Snow**    
**Helps the Flowers Grow...**

## Sunflowers!

As part of a 3<sup>rd</sup> grade science unit, students discussed the elements needed for plant growth and the concept of photosynthesis. They chose sunflowers to study, and germinated the seeds in their classrooms. After about 2 weeks of necessary care, they transplanted the plants outside. We are excited to watch the plants grow and to see them bloom in late summer. Make sure you look for them when we return to school! They are located in beds in the far side of the parking circle.
